EDUCATION

Northeastern University MS in Computer Science, GPA: 4.0 Courses: Data Structures & Algorithms, Distributed Systems, Object-Oriented Programming, DBM, Computer Networks	Sep 2022 - Dec 2025 Seattle, WA
Keele University/ Beijing Foreign Studies University BS in International Relations, First Class Honor, National Scholarship (top 0.01%)	Sep 2018 – May 2022 Newcastle, UK/Beijing, China

SKILLS

Programming Languages: Python, Java, C++, C#, Ruby, Swift, HTML, CSS, JavaScript, TypeScript, SQL
Frameworks: React, Node.js, Express.js, NestJS, Spring Boot, .NET, Django, Flask, SwiftUI, Webpack, Eslint
Tools: MySQL, MongoDB, Docker, Kubernetes, Jenkins, Nginx, RabbitMQ, Redis, AWS, Heroku, Terraform, Bash/Shell
Management: Git, GitHub Action, Bitbucket, Jira, Agile, Splunk, npm, yarn

WORK EXPERIENCE

Stripe Software Engineering Intern	Jan 2025 – Apr 2025 Seattle, WA
• Spearheaded the design and implementation of a JSON-based declarative system integrating with Stripe’s DSL framework, to automate data-fetching for visualization generation, which reduces dashboard development time by 86%. • Designed dynamic SQL templates using Ruby scripts, enabling context-aware query generation and injection prevention mechanisms to ensure secure and efficient data retrieval across the back-end system. • Developed a new visualization toolkit using TypeScript that provides a JSON editor and live preview engine, which accelerated initial adoption to 20+ internal developers within the two weeks. • Collaborated with front-end teams to build an encapsulated React component that consumes GraphQL APIs across three data sources to dynamically render visualizations based on configurations, enabling cross-platform data access.	

Northeastern University Career Peer Advisor	Aug 2024 – Dec 2024 Seattle, US
• Organized and led multiple career development events and workshops, engaging over 200 students, to create provided practical career advice and enhanced job-search skill • Analyzed attendance records and survey feedback with Python to identify popular topics and boosted satisfaction by 20%.	

Experian Software Engineering Intern	May 2024 – Aug 2024 Remote, US
• Collaborated with cross-functional stakeholders to define feature development using Agile methodologies and enhanced the user interface of web products at Ascend Intelligence Services with Remix and JavaScript. • Contributed to frontend configuration, backend features enhancement and development workflow optimization of an internal LLM RAG chat assistant using Django and React, integrating Terraform for infrastructure management. • Conducted Vitest and E2E testing to enhance code readability and maintainability, which ensured 95% test coverage. • Migrated legacy Webpack setup to Vite and optimized Docker workflow to improve development and build times by 26%. • Configured pre-commit hooks to integrate linting and testing tools within build environment to maintain code quality. • Integrated Adobe Analytics with cookie data consent to ensure personalized user experience and data privacy compliance.	

NEW EIG Software Engineering Intern	Oct 2023 – Apr 2024 MA, US
• Engineered a dashboard using Java, Spring Boot and React to monitor trading data performance applying Agile processes. • Optimized backend data solutions, from query optimization to API development and Redis caching integration, to enable a 25% improvement in dashboard load times, and monitored overall system performance. • Spearheaded a new recruitment page creation, featuring a multi-criteria job search bar implementation with React Hooks. • Implemented a periodic trading log to AWS S3 bucket using Kubernetes CronJobs to reduce storage space by 47%. • Automated build and release processes using GitHub Actions and Docker for CI/CD with pre-defined testing and Nginx configuration optimization, to align with system reliability.
